

INSTRUCTIONS FOR NATIVE GRASS SEEDS
BEING SPREAD WITH HERD GT-77

#538 Native Seeds Kit

NECESSARY EQUIPMENT:
HERD GT-77 SEEDER
HERD 504NT SEED GATE
HERD 517M BLOCKING PLATE

With the 504NT Seed Gate and the 517M Blocking Plate installed, set the opening size of the seed gate at ¼". (Use a ¼ drill bit to make this easier)

The base plate should be set between B & C for a centered pattern.

IMPORTANT!!!!

The material we have tested as a carrier is Oil Dry that is purchased from any automotive parts store.

During our tests, we have found that one 50# bag of Oil Dry will cover 8 acres. If you mix the seeds you are going to spread with the Oil Dry, you will get an even pattern for these seeds.

To Mix: Take the mixture and mix what you would spread per acre X 8. Take this amount and mix with 50# of Oil Dry.

The Oil Dry will spread over 20' wide, but the native seeds will only go 12' wide due to their light weight.

YOU MUST RUN ON 12' CENTERS

Running on 12' centers at 12 mph, it will take you 3 minutes and 26 seconds to cover an acre.

Since we cannot close the opening less than ¼" we can only lower your ground speed by using twice the amount of Oil Dry and running at 6 mph.
